

# Backup as a Service

## Recover reliably from secure off-site backup

Our fully encrypted, enterprise-class offsite backup and recovery solution provides the ultimate protection. You have the option to restore data and applications directly to your own infrastructure or ours on a self-serve or fully managed basis.

-  **Restoration at the granular level**  
We let you recover files as needed—self-serve or with our assistance
-  **Minimize the potential for disasters**  
Our network of seven data centers provide ample geographic separation, diverse power grids and high-availability architectures to keep your data safe
-  **Data secured in transit or at rest**  
From initial encryption at the source, during transit through our private fiber network, to encryption-at-rest in the backup grid, your sensitive information is always protected
