

# Virtual Private Cloud

Fully managed or self-serve

Monitor and track like your own private cloud

Add resources when you need them

All Flash Array

N+1 Infrastructure

Encryption

## Integrate with any cloud hosting solution

Built with an all-flash array, our virtual private cloud can deliver performance you need without sacrificing security. All of this is protected from downtime behind our fully redundant network and power infrastructure.

### Lower TCO

There's no extra hardware costs with our virtual private cloud hosting

### Maintain data integrity

Our cloud encrypts data in transit and at rest, so it's always protected no matter what

### Scalability when you need it

Move CPU, RAM and storage between servers or add additional resources in just a few clicks.
